Advanced Regenerative Peptide

AOD 9604 is a component of growth hormone made up of a peptide chain which causes the breakdown of fat which dislodges stem cells which then act to repair damaged connective tissue, bone etc. AOD 9604 is a modified form of amino acids 176-191 of the GH polypeptide. It was discovered that the fat-reducing effects of GH appears to be controlled by a small region near one end of the GH molecule. It works by mimicking the way natural Growth Hormone regulates fat metabolism but without the adverse effects on blood sugar or growth that is seen with unmodified Growth Hormone. AOD 9604 stimulates lipolysis (the breakdown or destruction of fat) and inhibits lipogenesis (the transformation of non-fat food materials into body fat) both in laboratory testing and in animals and humans. As a result of lipolysis, stem cells are released in abundance which gives AOD 9604 its other regenerative properties associated with prevention of osteoarthritis, hypercholesterolemia, bone and cartilage repair. AOD 9604 has an excellent safety profile, recently obtaining Human GRAS status in the USA.

Benefits:
• Bone and cartilage repair & regrowth
• Stimulate stem cells
• Anti-Inflammatory properties
• Prevention of osteoarthritis, hypercholesterolemia
• Fat loss properties
• Regenerative growth hormone
• No negative effect on carbohydrates
